

Multi-dwellings are running on green power!

Do you own a multi-unit residential building and are you planning to install charging stations to enable your tenants to recharge their electric vehicles?

Financial assistance is available for the acquisition, lease and installation of one or more 240 VAC charging stations for multi-unit residential buildings. The rebate may be as much as \$5,000 per charging station.

For all applicants who manage a multi-unit residential building, the maximum amount of financial assistance granted per building per fiscal year is set at:

Number of residential units per building	Maximum amount
5 to 9	\$10,000
10 to 19	\$20,000
20 +	\$25,000

+++

Load controllers allow connection of EV chargers to a panel which is at full capacity and would otherwise need a service upgrade. This ensures stable, efficient distribution of electrical load across your building infrastructure.
