

# Sapphire™ Touch Screen – Restaurant Applications

## Application

Maintain flexible control interfaces to meet multiple lighting space requirements and deliver a customer centric experience in a restaurant application featuring a bar, dining area, and large event rooms for hosting events such as banquets and meetings. Sapphire provides a customizable graphical user interface for the easy system integration of multiple Leviton lighting control products. This allows staff to control the lighting to enhance guest experiences, set scenes to create mood lighting, and increase energy savings. Event rooms can be rented out and run independently, but can also be controlled from the bar station.

## Leviton Solution

- Master Station
- Presets
- Stage Lighting
- Layered Lighting

Key Products	
Sapphire Touch Screen	Primary Load Control
Dimensions® 4000 Stations	Dimming Control for Separate Dining Areas
