

Leviton and SmartONE: A smart partnership

The demand for multifamily dwellings is on an upswing as individuals, families and retirees embrace the benefits of apartment and condominium.

Residents look to builders to outfit their units with all of today's most desirable features, including the latest electrical devices for safety, energy savings, connectivity and convenience.

Smart partnership

Build highly functional, smarter MDUs with Leviton and our partner SmartONE. Together we provide a platform which delivers smart lighting, smart management, smart home technology

and more, all resulting in safer and smarter communities.

We do this by creating smart homes for our residents and then integrating them into a unified community. Smart communities anticipate our customers' changing needs, provide future-proofed building amenities and enhance the living experiences.

Solutions

Our approach integrates a seamless mobile application with the smart home platform. This platform contains a wall pad, sensors and IoT devices. The homeowner simply downloads the app and registers on the wall pad, gaining control of their suite's features. With a simple touch of their phone or wall pad, the homeowner now has access to an integrated and secure smart home and community system. The app provides the homeowner with convenience,

flexibility, and security. The solution is customizable yet easy to use, keeping residents connected to their homes and communities; residents can adjust their suite's lighting or temperature, control building access, book amenities such as shared EV charging, submit a service ticket, or set their suite to away mode. The resident can access any feature they want right from their phone without making a trip down to the concierge or property management office.

User-Friendly Experience

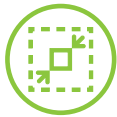

While the technology behind our solution is complex, the user experience on our app is not. The homeowner can easily find what they need, control their smart home functionality, and feel confident and secure using the solution.

Product Benefits

evr-green®

A Complete Line of Solutions for Electric Vehicle Charging

Compact

Easy-To-Use

Easy Installation

Load Center with Smart Circuit Breaker

Safer

As the leader in home electrical safety, Leviton delivers GFCI circuit breaker protection that exceeds UL requirements, locking users out if ground-fault protection is lost.

Fastest Installation

Leviton delivers the fastest installing and most advanced circuit breaker panel on the market. Our easy all plug-on design speeds up installation, saving valuable time and increasing productivity.

Sleek Design

The all-white indoor circuit breaker box with optional observation window is just the beginning. Leviton circuit breakers incorporate user-friendly diagnostics, such as color indicators in each rocker handle that indicate operating status, and easy-to-read LEDs that display fault type (AF/GF) when tripped.

decora smart®

Smart Lighting for Every Home

Schedule or dim lights when home or away

Easily group smart devices into rooms and create a scene to activate multiple lights at once
