Introducing the Building Dashboard Starter Kit

Transform occupants into active resource managers. The Building Dashboard Starter Kit combines Obvius' real-time electricity monitoring with Lucid's Building Dashboard software, making your data engaging and accessible on the web. This turn-key solution utilizes Building Dashboard to engage, educate, motivate and empower building occupants and managers to reduce consumption in their buildings.

obvius

Making Energy Front and Center

- Compare usage by hour, day or a custom time period, and express consumption in a variety of easy-to-understand units, like dollars and carbon emissions.
- Engage occupants and tenants and motivate them to conserve electricity through competitions, budgets and social commitments.
- Earn credits toward USGBC LEED certification
- Promote sustainability initiatives across your community

The Building Dashboard Starter Kit makes it easy for companies, universities, building owners, civic governments and other organizations to reduce utility costs and environmental impact through improved management and building occupant engagement.

The Starter Kit was developed following extensive experience with customers who are successfully monitoring electricity and displaying it on Building Dashboard. The Kit has been standardized to provide a low-cost, entry-level solution that can be installed easily and will work with nearly all existing electrical services.

What the Building Dashboard Starter Kit Includes

Each Starter Package includes a customized Building Dashboard for the web with a standard set of features. A broad library of additional features are available to purchase through Lucid.

The Kit Includes:
- A customized organization page with organization's logo
- Individual building pages with total building electricity monitoring
- Real-time trended resource graphs with animated unit equivalent gauges for carbon dioxide and dollars
- Add dynamic layers to graphs with predictive usage and outdoor air temperature
- The Homepage application with Green Tips, Comparison, and Weather widgets
- Comparison application with robust functionality allowing comparing trended energy usage information on custom time periods
