

# Maximize your Return on Infrastructure Investment (ROI) with RDT

## The Industry's Smallest Cat 6A Cable Family

### Save Big on Retrofits

For warehouses, retail spaces, and commercial buildings, RDT Cat 6A UTP cable saves an estimated 10% per project. Route small diameter RDT Cat 6A through existing Cat 5e or Cat 6 pathways to deliver solid application performance with enhanced transmission quality.

### More Sustainable

RDT's reduced diameter and no cross-filler design minimizes material use during production for a lower carbon footprint, and the 100% recyclable box packaging easily breaks down flat to take up less volume in the bin.

### Easy Deployment

Improve job site productivity with RDT cable in a box, which incorporates the patented TekLok™ interlocking tab system. This system ensures that box stacks remain stable during cable deployment, eliminating the need for extra manpower, speeding installation, and reducing overall project costs.

Assumptions Made: Installation assumes three floors cabled with RDT. The reduced diameter allows for the same number of cables in smaller pathways compared to competitors' larger diameter cables.
