

## Secure RJ System

### APPLICATION

The Leviton Secure RJ Copper System is designed to enable a physical layer of port security and port protection in standard RJ-45 copper ports in data center, telecommunication room, and work area applications. The system consists of field installable housings for field configured use on copper patch cords, Secure RJ plugs and extraction tools. Secure RJ patch cords and port blockers prevent unauthorized and unintentional port access to ensure continuous connectivity of high priority ports. All components are available in eight unique colors to identify, reserve, and segregate network ports. Each color requires its own color matched extraction tool to unlock a secured port.

### SPECIFICATION

The Secure RJ System shall consist of secure housing made of transparent polycarbonate UL 94V-2 material. Secure RJ Plugs shall utilize the same polycarbonate UL94V-2 material. Connectors and port blockers cannot be removed by hand; an extraction tool shall be used for removal, preventing unauthorized or accidental moves, adds, or changes. Eight unique housing color options shall be available for color coding of copper network ports, with matching color extraction tool required for secured port access. Housings shall be transparent to allow visible access to Link/Status LEDs on networking equipment. Secure RJ system shall be compatible with high density active network equipment and patch panels.

### FEATURES & BENEFITS

- Compatible with industry standard RJ-45 ports in electronic equipment, patch panels, and jacks
- Patent-pending locking mechanism cannot be released without matching-color extraction tool
- Compatible with high-density network equipment and 1RU 48-port patch panels
- Available in eight colors to reserve, identify, segregate, protect, and secure network ports
- Transparent polymer housing allows color coding while maintaining Link/Status LEDs visibility on active equipment
- Single system is compatible with all flush and most recessed RJ-45 ports
- Port blocker prevents unauthorized network connection via ports not currently in use
- Field installable allows for retrofit and initial installation on patch cords and reduced pre-planning

### DESIGN CONSIDERATIONS

- Use of eight different color options to reserve, identify, protect, and segregate networks in data center, telecommunication room, and work area applications
- Secure RJ components are not intended to prevent malicious removal

### MECHANICAL SPECIFICATIONS

Dimensions: See page 2  
Materials: Secure housing, port blockers, and extraction tools: polycarbonate, UL94V-2

### COUNTRY OF ORIGIN

USA

### WARRANTY INFORMATION
