Lever Edge™

The Game Changer for Time Saving Installs

On the jobsite, time is money. Did you know there is now a faster, easier and safer installation method for residential wiring devices. It's the innovative Lever Edge solution.

Lever Edge delivers the trusted performance and contemporary appearance of traditional Decora® devices in a new, easier-to-install and safer design. Check out the many advantages Lever Edge offers to make installation faster, **saving you time and money on every job:**

- Color-coded levers are easy to see in low light areas and help prevent miswiring
- The devices feature the ONLY screwless ground in the industry
- GFCI has a unique **blue** lever to easily identify line from load terminals, helping eliminate line load reversal
- 15A devices designed for use with both 14 and 12 gauge stranded and solid copper wire, 20A devices for use with both 12 gauge and 10 gauge
- One standard strip gauge for all devices
- No screws = no torque requirement concerns
- Self-grounding
- No exposed metal parts helps to prevent shorts/mishaps during hot testing; no electrical tape needed
- Wire openings prevent wire insulation from being inserted into the terminals
- Large strap for easier install on drywall imperfections
- Tongue and groove for easier alignments in multi-gang installations
- Color-coded terminals facilitate faster training for new installers vs standard installation methods
